### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Regarding **claims 4 and 16**, the closest prior art of record, **Bartneck** (US 4,333,193), discloses a method making a shoe within a casting mold with an upper edge (figure 3:30, 32), the shoe made of an upper piece (figure 3:2) which is formed of an upper and an inner sole (figure 3:14) fastened to it, the upper piece bonded to the sole in an assembled shoe, by inserting a fillet (figure 3:6) into the upper, filling the casting mold with a shoe base material (col 2:31-32), placing the edge of the upper piece on the casting mold edge from above (2:29-30, 33-35), placing a pressing frame (3:24) on the upper piece edge and thus on the casting mold edge, wherein only the upper piece edge rests on the casting mold edge and wherein the upper is fixed internally to the inner sole such that the shoe base material presses the inner sole against an edge of the upper that is adjacent to the fillet (2:36-38). **Bartneck** teaches that the pressing step includes expanding a shoe base material (col 2 ln 33-39).

Regarding **claim 7**, the closest prior art of record, **Liebscher et al.** (US 4,003,145), henceforth **Liebscher**, discloses a method of making shoes by placing an edge of an inner sole on the edge of a casting mold, placing an edge of a shoe upper piece (figure 4:1) in the mold and inside the an inner side of the inner sole (4:15), and pressing the two together (2:15-21).

In all three independent claims, the allowable feature which neither **Bartneck** nor **Liebscher** teaches is that the shoe base material presses the inner sole against an edge

of the upper that *lies against* the fillet. This feature is illustrated in Applicant's figure 1 where the outer edge 10 of inner sole 5 pinches the inwardly curled edge of shoe upper 8 against fillet 9. The closest related prior art, **Folschweiler** (US 4,562,606), teaches a similar structure wherein a curled edge of the upper (figure 4:12) lies between the inner sole (figure 4:13) and the fillet (figure 4:11). However, Folschweiler's inner sole is injection molded between the outer sole and upper after those two are already in place (2:5-7). Folschweiler does not teach pressing step, nor does Folschweiler provide a rationale for importing this type of structure into either Bartneck's or Liebscher's method. Therefore, it would not have been obvious to one of ordinary skill in the art to combine the structure taught by Folschweiler with the methods taught by Bartneck and Liebscher.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
